Summary

Dynamic Senior Software Engineer with over six years of experience in financial technology, specializing in adapting advanced trading systems. Proven track record in leading projects, including a web-based user management system for NUAM Exchange, utilizing agile methodologies and a diverse tech stack (Java, SQL, NodeJS, JavaScript) Experienced Java Developer with 6+ years in fintech, strong in Java, Spring Boot, RESTful APIs, and microservices architecture. Proven ability to work in fast-paced enterprise environments. Familiar with SQL databases, Git, and agile methodologies.

Work Experience

NUAM Stock Exchange
Senior Software Engineer

Santiago de Chile
September 2021 - Present

Developed and adapted a high-performance Java-based trading system, deployed for the Dominican Republic Stock Exchange. Ensured the system could handle 10,000+ transactions per second, meeting NASDAQ-level standards. Participated in enterprise-level Java development, using Spring Boot, RESTful APIs, and microservices architecture. Collaborated with different teams using agile methodologies to deliver scalable, production-ready solutions. Integrated SQL-based backend components and Dockerized microservices for deployment in Linux environments at the same time I used kubernetes for microservices and deployment.

NUAM Stock Exchange
Analyst Programmer

Santiago de Chile
May 2020 -2021

Designed and built a web-based user management system using Node.js, Loopback4, SOAP, and WSDL. Implemented and integrated with SQL Server via stored procedures. Developed responsive FRONT-END with ReactJS, AngularJS, HTML/CSS, and JavaScript. Enabled secure role-based access control and dynamic permission management across trading platform users. Supported backend deployment on Payara application server in a CI/CD pipeline environment.

Projects

Trading System Dominican Republic.

HT Trading System, I played a key role in developing and integrating a trading platform for the Dominican Republic market. Engineered with advanced components and a highly competitive approach to financial software development, this platform represents a significant advancement in modernizing and enhancing the efficiency of the Dominican stock market. I adapted and implemented the two primary markets for the Dominican Republic stock exchange, covering both fixed income and equity markets.

User Management System – Nuam Exchange Project

Tech: Java 17, Spring Boot, Keycloak, PostgreSQL, Docker, Kubernetes, CI/CD.

Designed and implemented a complete user management backend in Spring Boot, handling secure CRUD operations and business rules. Integrated with multiple Keycloak realms for authentication and identity federation across environments (QA, PROD, etc.). Automated deployments using Docker containers and visualized via Lens (Kubernetes dashboard).

Technical Skills

Programming Languages:

Java, JavaScript (Node.js), Python, Kotlin, PHP, C# (.NET)

Architecture & Integration:

RESTful APIs, Microservices, Integration Patterns

Frameworks/Libraries:

Spring Boot, Spring MVC, React, LoopBack 4

Databases:

PostgreSQL, SQL Server, MongoDB

Tools:

Gradle, Git, Jenkins, GitLab CI/CD

Education

Technological University of Chile (INACAP)

March. 2016 - December.2020

Informatics Engineering

Pontifical Catholic University of Chile (PUC)

March. 2021 - December.2022

Diploma in Mobile Application Development

Language

English Intermediate B2 - Worldwide School of English, Auckland, New Zealand

August. 2024 - March.2025

Spanish (Native)
